Udaipur, Rajasthan

Profile Summary

- Full Stack Developer with 3+ years of experience building scalable web applications using React.js, JavaScript (ES6+), Java, and Spring Boot.
- Experienced in integrating REST APIs and handling end-to-end application workflows
- Actively enhancing expertise in Generative AI and LLM-based applications, with hands-on experience using AI-powered tools for debugging, troubleshooting, and optimizing existing software solutions.

Experience

Software Development Engineer (Full Stack)

Jun 2024- Present

➤ E Connect Solutions Pvt. Ltd.

- Executed backend development using Java, JSP, and Spring Boot, enhancing web application performance throughout the full software development life cycle also integrated jQuery for dynamic front- end interactions.
- Engineered MVC-based applications by developing controllers and JSP pages, optimizing backend logic with Oracle and MySQL databases.
- Streamlined data retrieval and analytics by configuring Oracle SQL Server and executing complex SQL queries for real-time insights.
- Created and deployed WAR files on Jenkins, successfully launching applications on Tomcat Server with zero downtime.

Software Development Engineer (Full Stack)

Jun 2023– May 2024

➤ ARCGATE

- Designed and implemented backend business logic and database interactions using Spring MVC and DBMS (MySQL/Oracle) for secure data storage and retrieval.
- Worked on ARCGATE Self Service Portal, contributing to development and enhancement of web modules using Java, Spring Framework, JSP, and JDBC.
- Collaborated with the development team to build and maintain enterprise-level applications, perform bug fixes, and optimize application performance.
- Developed CRUD functionalities, form validations, and role-based access features to improve portal usability and data accuracy.

Education

Scaler : Specialized in Software Development & Problem Solving.

2024

Rajasthan Technical University, Kota (Bachelor of Technology)

2022

Electrical Engineering graduate with a background in circuit analysis and systems design (7+ CGPA).

Projects

➤ WorkFor Viksit Bharat (🔗)

- Designed and developed dynamic JSP pages to create an intuitive, responsive, and user- focused web interface.
- Integrated APIs to collect socio-economic indicators, contributing to real-time decision-making tools.
- Created responsive UI components using HTML, CSS, Bootstrap, and JavaScript.
- Participated in deployment, testing, and maintenance of the application, ensuring stability and timely updates.
- Issue Resolution and Bug Fixing using Claude CLI.

➤ NHA Internship Application Portal (🔗)

- Designed and developed dynamic JSP pages for the NHA Internship Application Portal to manage internship applications and candidate records.
- Created form handling and validation logic to ensure accurate submission of internship details and prevent invalid entries.
- Built responsive UI components using HTML, CSS, Bootstrap, and jQuery for improved user experience.
- Optimized SQL queries reducing average load time by 35%.
- Collaborated on testing and debugging to resolve production and environment-related issues.
- AI-Assisted Debugging & Troubleshooting (Claude CLI)

➤ Rajasthan Recruitment Portal (🔗)

- Converted a legacy JSP-based application into a modern React.js Single Page Application (SPA) improving UI responsiveness and user experience.
- Implemented reusable components, React Hooks, and efficient state handling for scalable frontend architecture.
- Integrated REST APIs for dynamic data rendering and optimized performance using lazy loading and modular structure.
- Improved application maintainability and reduced load time significantly.
- AI-Assisted Debugging & Troubleshooting (Claude CLI)

➤ Smart Resume Summarizer

- Built an AI-powered resume summarizer using **Java, Spring Boot, and NLP libraries**, automatically extracting skills, experience, and achievements from uploaded PDF resumes.
- Designed and exposed **REST APIs** in Spring Boot to handle resume parsing and summary generation, delivering results in under 3 seconds.
- Implemented NLP-based text processing to intelligently identify and rank key candidate information for quick profile evaluation.
- Built a responsive frontend interface using **React.js** allowing seamless PDF upload and instant summary display.

Skills

- Languages: JavaScript (ES6+), Java, Python, .NET
- Backend: Spring Boot, REST APIs
- State Management: Redux Toolkit, Context API
- Databases: MySQL, Oracle
- AI/ML (Learning): Generative AI, LLM Basics, Prompt Engineering

- Proficient in leveraging **Claude CLI** for debugging, troubleshooting, and resolving issues in existing applications.
- Tools: Jenkins, Tomcat, Git
- Frontend: React.js, HTML5, CSS3, Bootstrap, jQuery
- Data Fetching: REST APIs, Axios

Achievements

- 100+ programming problems solved on scaler.
- Certified in Data Structures & Algorithms, Java, JavaScript, Low-Level Design, Backend Development (Spring Boot), and Databases & SQL – Scaler & NSDC.
- React – The Comprehensive Guide: Including Hooks, React Router, and Redux.
- The Complete JavaScript Course (2022 Edition): From Beginner to Expert.
